COMMONS ATTRIBUTION 4.0

Creative Commons Licenses

Are licenses that content creators can add to their works in addition to their copyright protections. CC licenses work within copyright, but give end users extra permissions for use.

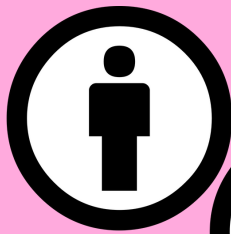

CC Licenses do not interfere with exceptions to copyright. For example, fair use still applies and might give users fewer restrictions than even the CC licenses give.

The licenses are built upon three layers:

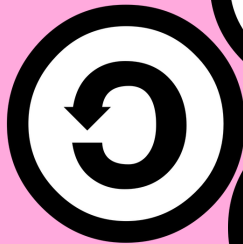

- The legal code: all the legalese that gives CC licenses their ability to grant permissions to users
- Commons Deed: The human readable terms
- Machine Readable layer: provides a mechanism for CC licensed works to be identified by computers on the backend

There are four building blocks that combine to make up the different licenses

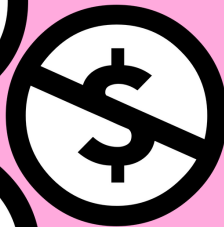

BY: The basic component on every license. Just means you are required to provide attribution.

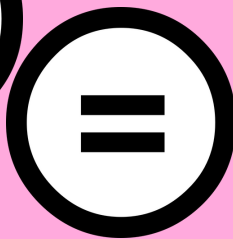

Share Alike (SA): Each remix or derivative work must use the same license as the source material

Noncommercial (NC): The new work must not be used for commercial purposes. Don't use them to make a profit.

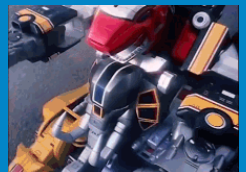

No Derivatives (ND): No new works. Remixes and adaptations are not allowed. Use the work in its original form

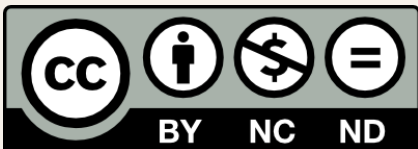

THESE COMPONENTS COMBINE TO MAKE THE SIX DIFFERENT CC LICENSES.

IT'S KINDA LIKE THE MEGAZORD

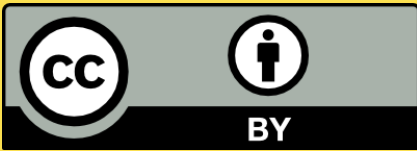

The individual components make up the 6 CC License

Least Restrictive

Most Restrictive

Just include attribution in the new work

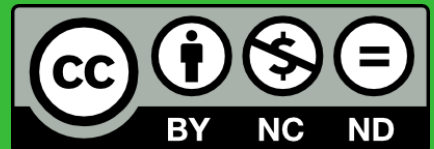

Include attribution, and also use the same CC license in the new work

These two are the same as the two CC licenses to the left, but NC adds the restriction that the new works cannot be sold for profit

They can however be sold at cost. Like in your campus bookstore for example

These two licenses basically mean you can only copy and share the original work. No remixes or adaptations allowed. The inclusion of NC on right again means you cannot sell the original work for a profit.

Creative Commons also makes images (not licenses) for Public Domain content

CC licenses should not be applied to works in the public domain

This is not a CC license. Content creators can use this tool to mark as dedicated to the public domain. Which allows people to use their work without copyright restrictions

This is not a CC license. This tool allows users to mark works they know to be in the public domain as such when they use or share the work.
