

# Voyager Web Reports for I-Share

<https://web-reports.carli.illinois.edu/>

Voyager Web Reports is a web-based reporting tool designed by CARLI IT staff to provide an easy way for I-Share library staff to run reports against their Voyager databases without the need to install the Oracle/ODBC client software or use Microsoft Access.

A CARLI Voyager Oracle Account and a web browser are the only requirements to log in and use Voyager Web Reports. I-Share Liaisons can request new Oracle accounts for staff members who do not already have one by filing a Work Request Online for a “Voyager Oracle Account Request”.

For additional information, see: <https://www.carli.illinois.edu/products-services/i-share/reports/web-reports>

Watch a brief video introduction of Voyager Web Reports at: <https://youtu.be/YobvxwtIBIU>

The screenshot displays the Voyager Web Reports for KCC interface. The top navigation bar includes 'Voyager Web Reports for KCC', 'Reports', and 'View All Results'. A search bar on the right is labeled 'Search report names...'. The left sidebar shows a tree view under 'Local Cataloging Maintenance' with categories like 'Bibliographic Records' and 'Control Numbers'. A list of reports is shown, with the selected report 'Bib record 035 \$a begins OCoLCocm but has more than 8 digits' highlighted. The main content area displays the report title, a description of what it does, a note on its usefulness, and a list of suggested priorities. A 'Submit Query' button is visible at the bottom. A 'Recently Completed Reports' box on the right indicates 'No recent results found'.

There are currently over 100 reports available on the site in Acquisitions, Cataloging, Circulation, Reserves, System Administration, and Universal Borrowing—including many of CARLI’s Suggested Priorities for Bibliographic, Holding, and Item Record Maintenance—with more being added.

A complete list of reports currently on Voyager Web Reports can be found at: <https://web-reports.carli.illinois.edu/report-list/>

Results can be viewed, sorted, and searched directly in the web browser in HTML, or they can be downloaded in CSV format for local manipulation.
