ExLibris
Voyager

Release:
7.2.2

Highlights:

This release contains bug fixes for various staff modules and WebVoyáge.

General documentation for this release:

http://docs.exlibrisgroup.com/docportal/

KB Number	Description	Solution	Implementation Notes	Related Documentation	Module	Issue Number
16384-2711	In Acquisitions, if you go to File>Search to get to Boolean searching, then select Help>Help Topics, you get a *Run Time Error 6: Overflow* message and are kicked out of the client.	Help is now invoked from the search form using the same function as from the other forms.The search form was still calling an older function that caused a run time error.			Acquisitions	14702
16384-28257	In Acquisitions, in Session Preferences, the user changes the Default Workspace to be Search Orders. When first logging in, the Listbar displays the Orders choice with 3 icons (New Purchase Orders, New Order from Bibliographic Record, Search Orders). After the initial login, the New Order from Bibliographic Record never displays again.	The icon was removed for the New Order from Bibliographic Record feature from the listbar. Its corresponding menu option was removed, too. This feature is not available.			Acquisitions	15075
16384-2734	In Acquisitions, when in an item window (either creating or viewing), the keyboard equilavent, Alt-C, does not work to close the window. You must click the word Close.	The hotkey for the Price field was reassigned on the item form from ALT-C to ALT-I so that it does not conflict with the ALT-C for the Close button. ALT-C now closes the window as expected.			Acquisitions	15090
16384-28258	In Acquisitions Serials Check-In, if you click done on the recap screen, the Other search button is inactive.	The logic was changed to ensure that the Other search button is enabled at the correct times.			Acquisitions	15125
16384-28259	In Acquisitions, if one clicks the Subscription Pattern button on the Type tab of a line item and the main Acquisitions window is minimized, the subscription pattern window does not open until you click the Voyager Acquisitions button from the taskbar at the bottom of the desktop.	When the subscription maintenance form receives focus, it is ensured that the main window (its parent) has a normal state, that is, is not minimized.			Acquisitions	15129
16384-2885	On the PO screen in Acquisitions, it should not look as if the Alt-a causes three very different operations: (1) Go to the Header tab (2) Save the PO on the toolbar line, and (3) Approve the PO.	The alt hotkeys were removed from commands on the toolbar. The menu hot keys can be used to get at the same functions.			Acquisitions	15214
16384-2970	In Acquisitions Serials History, using alt-s and alt-o just highlights the start over and holdings buttons respectively.	The hotkeys were changed for Start Over (ALT-T) and Holdings (ALT-G).			Acquisitions	15333
19345	BatchCat has a problem with a 245 field that begins with $k instead of $a.	A bibliographic record that has a 245 field starting with a subfield k and no subfield a, can now be added to Voyager via BatchCat. The sofware now only validates the presence of at least one subfield in the 245.	The client installation should install a new `batchcat.dll`.		BatchCat	15786
16384-3153	In circulation, when you perform a patron name search, the keyboard equivalent (the hot key alternative to clicking the boxes with the mouse) is the same (the letter L) for both the Library and Last Name input boxes.	The Library field hotkey was changed to ALT-Y so that it does not conflict with the Last Name field hotkey.				16106
16384-2871	If there is a discount for a vendor account and that account is selected in the order portion of a Bulkimport Rule, the discount is not applied to line items on the PO created by Bulkimport.	If there is a discount for a vendor account and that account is selected in the order portion of a Bulk Import Rule, the discount will be applied to all line items on the PO created by Bulkimport.			Acquisitions	16280
16384-2971	In Acquisitions, you are unable to click the Override Rules tab when you are looking at a Summary Fund (this is how it should be because Summary Funds don't have any money allocated to them). However, you can access the Override Rules by opening the Fund menu and selecting it from there. Then you can change the values and save the values to the database. You should NOT be able to do this.	When a fund is selected from the ledger/fund tree, the fund tabs are already enabled/disabled based on the fund type. The code was updated to also enable/disable the fund menu options which correspond to the tabs.			Acquisitions	16385
16384-2886	In Acquisitions, the Alt-V command only moves one to the Vendor History tab and not ever to Save and Close the PO window.	The alt hotkeys were removed from commands on the toolbar. The menu hot keys can be used to get to the same functions.			Acquisitions	16758
19376	In System Administration, operators that are able to delete items are now also able to delete MFHDs.	Permission to delete an item in the cataloging profile is no longer dependent on the permission to delete a holdings record.			System Admin	17070
16384-2888	In Acquisitions, you should be able to create separate Notes for a fund on different ledgers.	Fund notes were enabled to be created for a fund on different ledgers.			Acquisitions	17167
16384-2884	If you try to save an invoice with an invoice number with more than 25 characters, you get the message *an error occurred while storing the invoice!*	The MaxLength property of the invoice number edit box was set to 25. This now matches the database limit for that field.			Acquisitions	17286
19578	The system allows you to create a location code with a space at the end. This gives you an *unauthorized or invalid location in subfield b of 852* error message in Cataloging when trying to save a MFHD using that location code.	New location codes can no longer be saved with trailing spaces.			System Admin	18248
16384-28260	Tag table errors.	The errors have been corrected.	New tag tables are needed.		Voyager	37788
16384-5265	Only one limit may be applied to each quick limit option.	The logic was added to handle multiple limits to be associated with one quick limit drop-down option. A vertical bar was used to define multiple limits in the `webvoyage.properties` file.	Changes to webvoyage.properties. Comment added to the Limit To section.		OPAC	16384-1969
16384-5377	The post limit filters display in no particular order, and there is no way to change it.	The post limit filters were made to display in the same way as the quick limits by using the order information from the `webvoyage.properties` file to sort the post limits.			OPAC	16384-2049
16384-7620	The Headings list page does not show headings type.	The headings type was added for each heading to the Headings list page in WebVoyáge.	Changes to cl_resultHeadings.xml and resultHeadings.css.		OPAC	16384-2850
16384-22340	Running circjob 6 at the pickup library after a hold has expired does not remove the entry from ub_hold at the holding library.	Circjob 6 will remove the ub_hold record at the holding library when the job is run at the pickup library to clean up expired holds.			Universal Borrowing	16384-3777
16384-9558	When a MFHD tag is used more than once, there is no linebreak or space between one subfield and the next.	This was found to be working correctly in 7.2.0, 7.2.1 and 7.2.2. No fix is required in this service pack.			OPAC	16384-4001

KB Number	Description	Solution	Implementation Notes	Related Documentation	Module	Issue Number
16384-10197	The order in which individual records are presented post Call Number Browse search deviates from the order in which they display in the results list, sometimes skipping records, sometimes displaying out of order completely.	Problems with call number browse searching from the holdings page with the Previous or Next holdings pointer were corrected.			OPAC	16384-4098
16384-12996	The meta tag redirect is loaded after the timeout redirect. IE7 only interprets the first meta redirect so the login page does not redirect, and the display is missing information.	In WebVoyáge on the IE7 browser, bypassing the login screen for external patron authentication works successfully in 7.2.2, 7.2.1 and 7.2.0. No fix is required in this service pack.			OPAC	16384-5090
16384-13399	Anytime there is more than one demerit (any balance) applied to a patron record, the total is incorrect on the top right under Your Items.	The demerits total on My Account page in the Your Items box was corrected.			OPAC	16384-5153
16384-17650	When viewing holdings information for a record, the 866 holdings information displays twice.	The 866 holdings information is processed separately from the 853/863 pairs. The 866 information now only displays once.	Changes to 104X_display.xsl.		OPAC	16384-5841
16384-15281	Circjob 43 notes that the row exists and that it is removing it. However, it doesn't actually delete the row.	The orphaned ub_hold rows from the remote database's ub_hold table are cleared by getting all fields of the table row defined correctly in the SQL delete statement.			Batch jobs	16384-5953
16384-16291	If a patron's record is expired, viewing the account information in WebVoyáge shows a block that states *All Patron Groups Reason* without providing any additional details.	This was found to be working correctly in 7.2.2. No fix is required in this service pack.			OPAC	16384-6481
16384-16497	Some fields in the Circulation and Call Slip clients cannot be added in Query Studio or Report Studio.	The addition of all fields is allowed in the presentation layer to reports using Query Studio or Report Studio.			Voyager Analyzer	16384-6609
16384-16834	Grace periods are not recognized for intervals set to minutes (fines are assessed starting as soon as a booking is overdue).	Grace periods set in Media Policy Settings are applied when the interval frequency is set to minutes or hours.			Media System Administration	16384-6689
16384-17201	If a Patron Group is set to Display OPAC Messages in System Administration, but the corresponding messages are not set up in WebVoyáge, a system error is encountered when viewing a results list with an item checked out to a patron in this group.	This was resolved by the fix to KB item 16384-24257 (issue 16384-9713).			OPAC	16384-6705
16384-17202	Items marked as Lost display with a status of 13.	The missing status was added for an item marked as lost, and the corresponding customized message displays for any item with a status of lost.	Changes to webvoyage.properties.		OPAC	16384-6721
16384-16977	When a patron views his/her charged items via WebVoyáge, checks Select All, clicks Request Renewal, and if the charged items range across multiple databases, only the items from the first database listed has its items renewed.	The cl_myAccount.xsl file was modified to send all of the items when the select All check box is selected on the My Account page for charged items. It now renews all items from multiple databases.	Changes to cl_myAccount.xsl.		OPAC	16384-6737
16384-17654	Using the nonFillingIndicator attribute within displaycfg.xml and/or displayHoldings.xml has no effect. Redirects use the full title as stored in Cataloging, not taking into account any nonfiling indicators.	The display.xsl file was modified to retrieve the value of the second indicator from the MARC record itself and the nonFillingIndicator variable was changed to nonFilingIndicator.			OPAC	16384-6929
16384-18020	Limits are available, but do not work when multiple libraries are searched.	A partial fix was completed until the next service pack where the post limits problem will be corrected. In 7.2.2, limits (pre and post) are now only available when searching a single database.			OPAC	16384-7009
16384-18021	Public notes and Enumeration set in E-item course reserve records do not display in the OPAC record for that e-item title.	The display.xsl file was modified to include public notes and enumeration fields for an e-item on the holdings page.	Changes to display.xsl file.		OPAC	16384-7025
16384-18248	Post-simul-search sort only displays local results.	The Sort By option is only available when searching a single database.			OPAC	16384-7185
16384-18385	On the short loan request form, the start time drop-down list does not refresh when selecting different copies.	The start time drop-down list will refresh when a different copy is selected on the short loan request form.	Changes to deploy cl_requestForms.xsl.		OPAC	16384-7266
16384-18387	The bibliographic/MFHD information that displays in the bibliographic level form does not include location, and it cannot be added.	The location now displays in the bibliographic level request if requested in requestholdingscfg.xml.	Changes to requestholdingscfg.xml.		OPAC	16384-7283
16384-18884	Using the print option to print a brief record may not print all of the displayed labels and/or fields if there are multiple MFHDs which span across more than one page.	The brief record selection now prints all of the information generated on the print page using both browsers (Internet Explorer and Firefox).	Changes to printBriefRecord.css.		OPAC	16384-7649
16384-18914	When using Access 2007 with Reporter, multiple runtime errors are encountered because of an inability to locate the utility.mda file.	This was found to be working correctly in 7.2.0, 7.2.1, and 7.2.2. No fix is required in this service pack.			Reporter	16384-7745
16384-18917	Running an index regen with all of the elink options set to Y only rebuilds the elink_index table for records with record_type A, B, or M leaving out records with a record_type of E.	An option was added to the index regen process to rebuild the elink_index entries with a record_type of E with e-item data from the eitem table.	Changes to the REGEN.indexes script.		Server issues	16384-7777
16384-19974	The URL returned when multiple items are renewed includes data for each item renewed. These URLs can be too long for Internet Explorer or Firefox to display.	The form action was modified to post so that patrons with a long charged items list can now select the Renew All feature and get a successful display.	Changes to cl_myAccount.xsl. The form action was changed to POST.		OPAC	16384-8193
16384-20162	If the bibliographic record in question has multiple holdings records and, at least, one of which has multiple items, you receive an error message when you attempt to change the request from title to copy level.	This works in 7.2.0 and above. No fix is required for this service pack.			Circulation	16384-8321
16384-20898	The hold shelf life for a title level request placed through WebVoyáge is being dictated by the All/All matrix setting in the policy definition that contains the circ happening location where the item was discharged.	The patron group ID has been added to Add Hold Recall requests.			OPAC	16384-8626
16384-21511	When a window other than the patron record is in focus, clicking the fine fee button on the patron record sometimes results in a run time error 13.	The sporadic errors that could occur when clicking any button/icon such as Fines/Fees or Charged Items on the Patron form while having focus on another form such as the discharge form were corrected.			Circulation	16384-8817

KB Number	Description	Solution	Implementation Notes	Related Documentation	Module	Issue Number
16384-22785	If an hourly/minutely loan item is charged out on a closed day or open exception date (with changed hours) and the Apply Fixed Due Time to Overnight Loans box is checked, any hourly/minutely loan is assessed a due time of the library's close time on the exception day/closed day.	The due date calculations were corrected so that hourly- or minutely-made loans should be assessed the correct loan period when a charge happens on a closed or exception date.			Circulation	16384-9330
16384-22978	Circjob 31 does not suspend all eligible patrons when it encounters a patron with a large number of entries in the `fine_fee` table.	The list of fine IDs being posted sometimes exceeds the capacity of Oracle to select them using a single list. The select to complete by breaking the list of fine IDs down into smaller chunks that do not exceed Oracle's capacity was enabled.			Batch jobs	16384-9345
16384-22979	E-mails that would be sent by the OPAC as the result of any of the request forms are never delivered.	The path of the Cataloging system call was altered from `/usr/bin/cat` to `/bin/cat` for Linux. The process of sending e-mail uses the `cat` command to send the e-mail file to the sendmail program. Linux places the `cat` command in a different directory other than UNIX .			OPAC	16384-9377
16384-24257	When searching another Voyager database that has Status Patron Groups set up in System Administration, you receive a WebVoyáge system error when a title checked out to a patron that is in one of the Status Patron Groups is included in the results list.	The logic has been added to display the results list without an error when searching another database.			Universal Borrowing	16384-9713
16384-24339	When circjob 43 updates the home database's `ub_charge.due_date`, it seems to be pulling the remote database's `circ_transactions.charge_due_date`, not the `circ_transactions.current_due_date`.	The charge due date has been changed to the current due date when updating the home database's `ub_charge` table based on the remote database's `circ_transactions` table.			Universal Borrowing	16384-9761
16384-26097	vprimo `extract:extract` dies when it encounters a certain record in the processing.	When parsing the bibliographic record, it continues with the extract process if the 001 tag is not found.			Primo extract	16384-10145
16384-26801	`WEBV:renews` look to the wrong policy definition for some matrix data.	It has been updated to make sure the correct policy is used when determining item or patron blocks. It is either based on the item's location or the OPAC circ desk if coming from the OPAC or the Circulation circ desk when coming from the Circulation client.			OPAC	16384-10465
