

## Customizing the SFX A-Z List (version 3): Template Diagrams

### Introduction

The SFX A-Z List is highly customizable, in terms of its content, its functionality, and its look and feel. The diagrams on the following pages are intended as a supplement to the Ex Libris documentation, particularly chapter 2 of the *SFX User's Guide Part 2*. CARLI libraries desiring to edit template files may do so via the UNIX File Manager (see "Using the UNIX File Manager on CARLI's SFX Server" at [https://www.carli.illinois.edu/sites/files/sfx/documentation/secure/01-CARLI\\_Overview.ppt](https://www.carli.illinois.edu/sites/files/sfx/documentation/secure/01-CARLI_Overview.ppt) or may request copies of the files from [support@carli.illinois.edu](mailto:support@carli.illinois.edu).

## Title Search ("Starts with"): Detail View

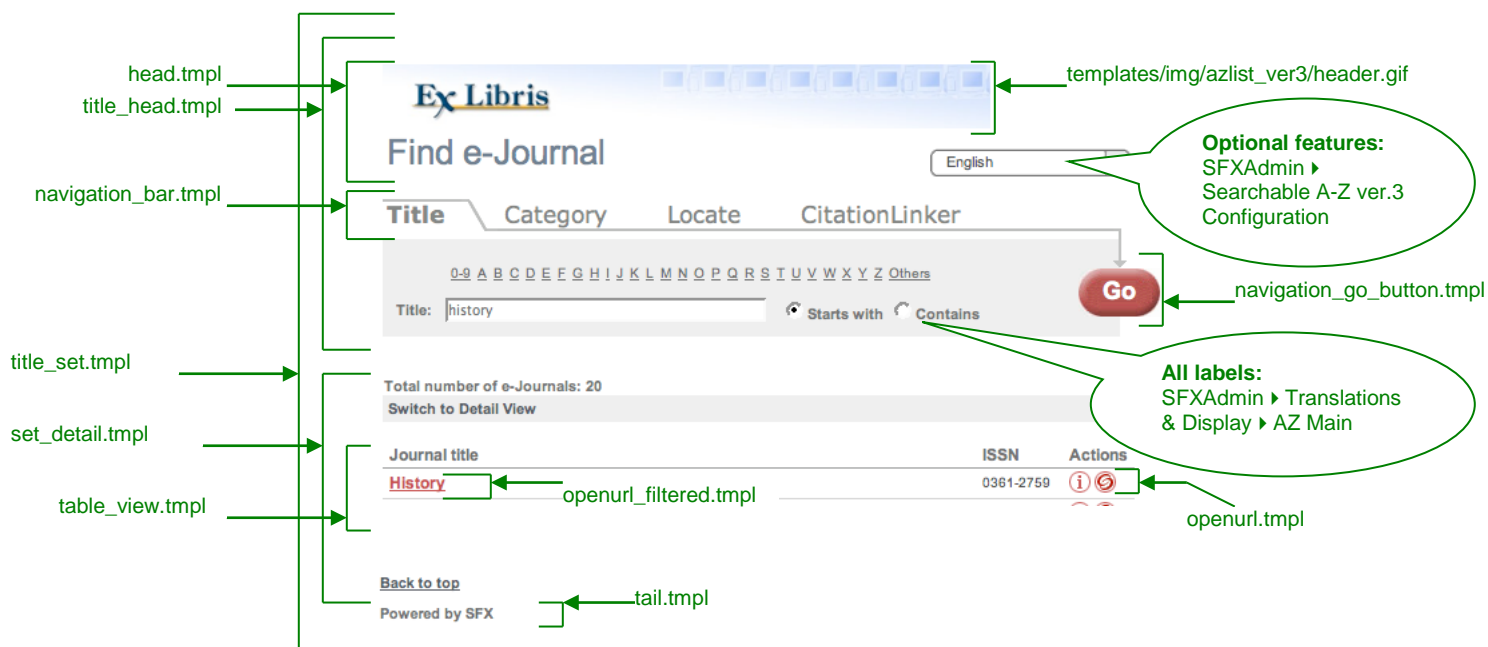

- Note: Version numbers can be confusing: SFX overall uses software version 4, the A-Z lists are version 3. These two version numbers are not related.
- Search form features and defaults, and the data elements included among the search results are all configured in SFXAdmin > Searchable A-Z ver. 3 Configuration.
- Boilerplate text (labels, etc.) is all defined at SFXAdmin > Translations & Display > AZ Main.
- All tpl files identified in this diagram are in the directory `templates/azlist_ver3/`.
- The default directory for images that display in the A-Z List is `templates/img/azlist_ver3/`.
- Documentation is available in the *SFX General User's Guide* chapter 8. And *SFX General Advanced User's Guide* chapter 3. Download the newest version from [https://knowledge.exlibrisgroup.com/SFX/Product\\_Documentation/01\\_Version\\_4.0](https://knowledge.exlibrisgroup.com/SFX/Product_Documentation/01_Version_4.0)
